

Service Entrance Cable

A service entrance cable is the link between the power line provided by the utility company and the main electrical panel. Since the cable is often exposed to outdoor conditions, it is engineered to withstand the elements. Classic Wire offers two types of service entrance cables: Style R (SER) and Style U (SEU).

Service Entrance Cables, Style R & Style U

Our Inventory

SER and SEU are essential components for powering commercial and residential buildings. These cables are primarily used for distributing power from the electrical meter to the main service panel, ensuring safe and reliable energy delivery. SER and SEU are available nationwide across our three national distribution centers, as well as select rep warehouses.

Count on Classic for Service Entrance Cable

CABLE CONSTRUCTION

Conductor

Annealed compact stranded AA-8000 series Aluminum Conductor Material (ACM).

Insulation

Abrasion, moisture, and heat resistant color coded crosslinked polyethylene (XLPE), UL Type XHHW.

Tape and Finish Covering

Sunlight resistant, RoHS compliant, flame retardant, gray polyvinyl chloride (PVC) material.

Assembly

SER: Insulated conductors are cabled with a bare conductor. A flame retardant fiberglass reinforced binder tape assembles the core in a circular configuration.

SEU: Solid bare wires are helically applied over a pair of parallel insulated conductors. A flame retardant fiberglass reinforced binder tape assembles the core in a flat configuration.

SER

SEU

WHY CLASSIC WIRE?

Engineered for Performance

Classic Wire's SER and SEU cable is manufactured and listed in accordance with ASTM, ICEA, UL and NEC standards and certifications.

Consistent Stock Availability

Both SER and SEU cable is stocked nationwide, ready to ship in days - not weeks! We offer coast-to-coast coverage in 1-2 business days.

Trusted Across Markets

Classic Wire's SER and SEU cable is trusted by customers across the residential and commercial markets.
